

Abstract

Title:

Exogenous factors selected for the development of football talent

Targets:

The aim of this study was to characterize selected exogenous factors influencing the development of football talent. Find out how and how much these factors influence the football talents in the Czech Republic.

Methods:

In the work was used qualitative research. Structured interview method was applied to obtain information from agents and football coaches of youth teams. The questionnaire method with open questions was applied to the football talent and stakeholders of football grounds. Comparison method was used to compare the information.

Results:

The results summarize the degree of influence and share of each factor in the development of football talent in the Czech Republic. Results from questionnaires and interviews are presented in a written summary and presented in the same order in which questions were asked.

Keywords:

Talent, football, football agent
